## Color Palette

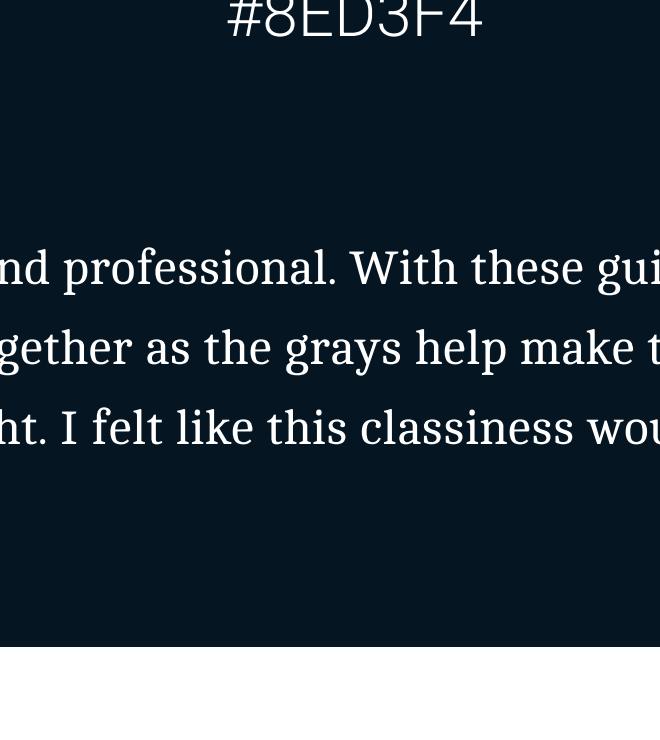

#276D82

#E4EBF2

#8a8683

#8ED3F4

When it came time for me to pick a color palette for this website I knew I wanted something simple but effective and professional. With these guidelines in mind I immediately fell in love with the color scheme shown above. I thought that these colors would work well together as the grays help make the site look professional and classy but then you add the blues and it gives it a nice little splash of color that just feels right. I felt like this classiness would fit well with the nature of this site and would just overall complement it.

## Typography

### Libre Baskerville

#### Heading Font Family

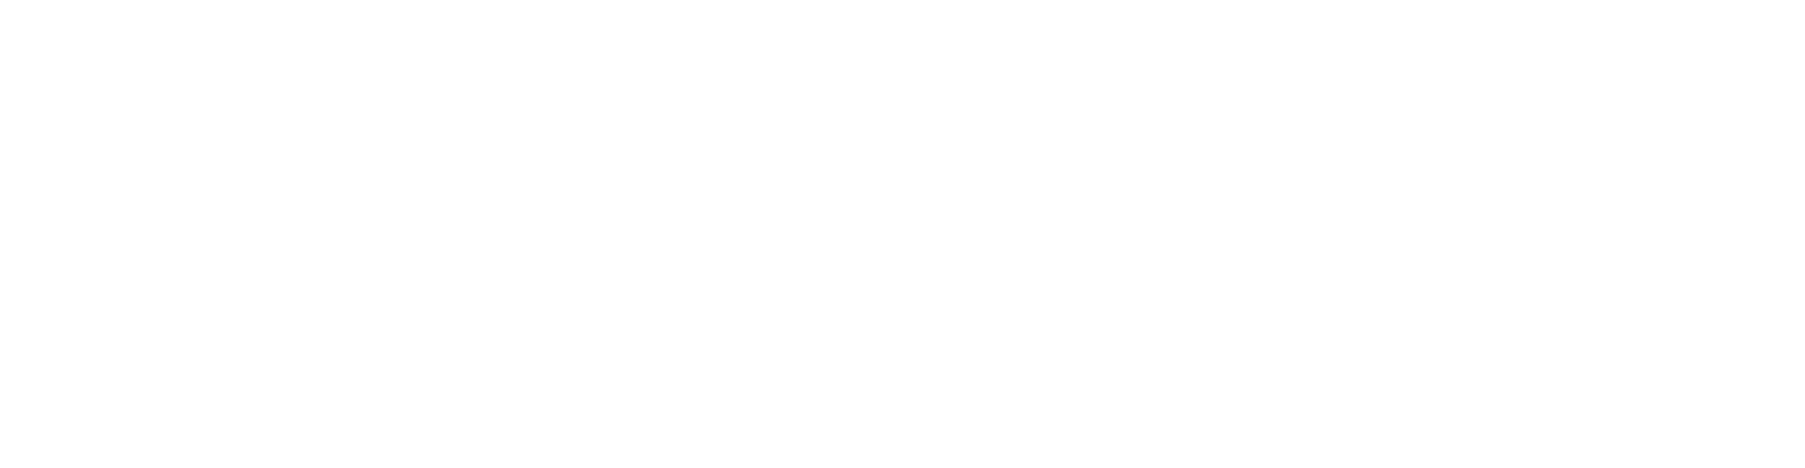

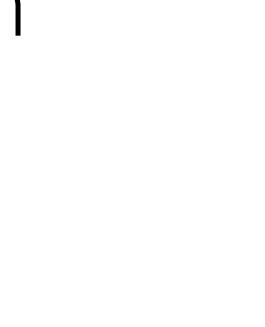

ABCDEFGHIJKLM NOPQRSTUVWXYZ  
abcdefghijklmnopqrstuvwxyz  
0123456789!@#

### Raleway

#### Text Font Family

ABCDEFGHIJKLM NOPQRSTUVWXYZ  
abcdefghijklmnopqrstuvwxyz  
0123456789!@#

## Iconography

## Bootstrap Modification

One major aspect of this project was the modification of Bootstrap elements. This site used a good amount of Bootstrap and I didn't want that Bootstrap to just be the generic copy and pasted elements without any changes. And while the changes I made weren't super drastic I do believe that they were nice touches that helped make the site as a whole look nicer.

For example, you can see in the above image that I adjusted this Bootstrap card to fit my site significantly better. The main purpose of this site is to buy used cars from people and this section of the page focuses on the recent purchases made by this fake company. To make this card fit my needs I styled the Bootstrap to look a little cleaner, added a list and a header area, and then added an accordion style dropdown menu to fit the vehicle description. All of these decisions together helped to make my site look more professional and clean.

# Modern Arcade Guides (Design #1)

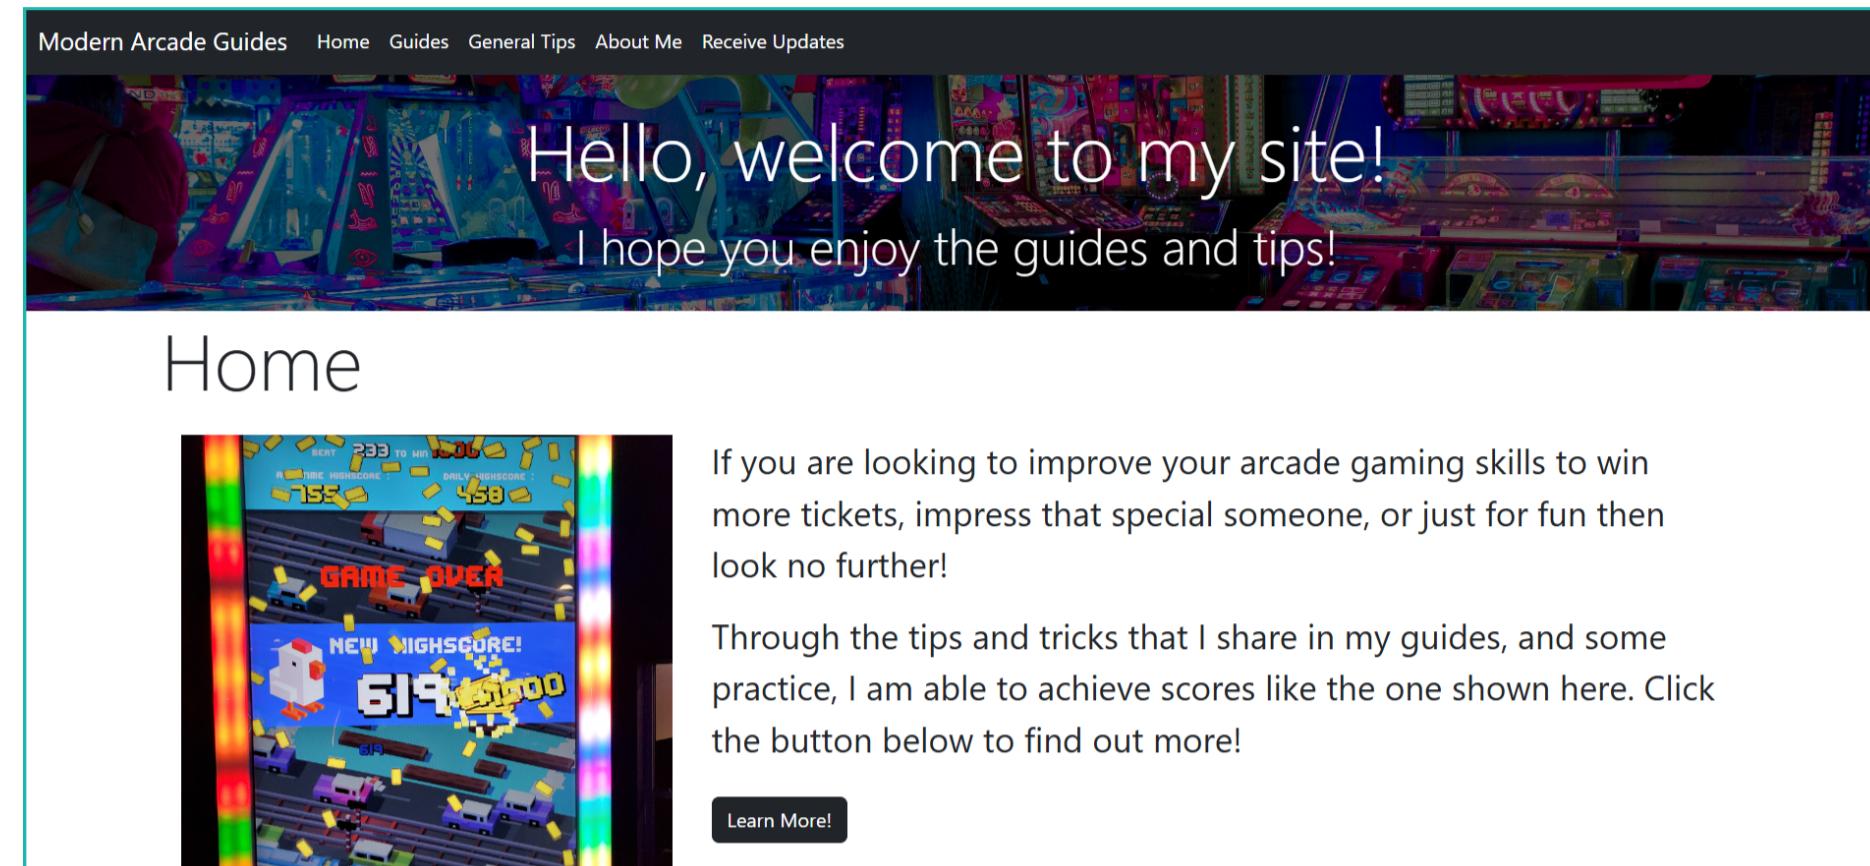

- Project Details: This site was targeted towards younger teenage boys who enjoy gaming. Going through the design process with prototyping and then actually coding this site ended up taking me about 35 hours.
- Purpose and Scope: I made this site to put some of my knowledge of arcade gaming into a space that could be shared with others so they could hopefully improve and experience more success. Coding this website took me a while as I ended up creating five pages to fit the content I wanted.
- Design Decisions: The main descriptor I had on my mind while designing this sight was, "welcoming." As a result of this I decided to implement some fun colors that give off a very cheerful and inviting energy. I also wanted a pretty simplistic layout to again make it easy to navigate and more welcoming.
- Required Elements: I made this site for a class and it was the very first big project I made that used Bootstrap. For this project, I was required to utilize Bootstrap to include elements like tables, forms, and lists.
- Results: In the end I was able to create a simple and inviting website for providing people with several modern arcade guides. I learned to utilize Bootstrap effectively to implement helpful elements and save myself valuable time in the coding process. By following the necessary guidelines of the assignment and creating a nice finished product I was given an A grade for this project.

# Modern Arcade Guides (Design #2)

The screenshot shows the homepage of the 'Modern Arcade Guides' website. At the top, there is a navigation bar with links for Home, Guides, General Tips, About Me, and Receive Updates. The main header features a vibrant, colorful image of an arcade interior with many games and a person in the background. Overlaid on this image is a dark banner with white text that reads 'Hello, welcome to my site!' and 'I hope you enjoy the guides and tips!'. Below the banner, the word 'Home' is centered in a large, bold, black font. To the left of the text, there is a small screenshot of a game showing a high score of 619,500. To the right of the text, there is a block of text that says: 'If you are looking to improve your arcade gaming skills to win more tickets, impress that special someone, or just for fun then look no further! Through the tips and tricks that I share in my guides, and some practice, I am able to achieve scores like the one shown here. Click the button below to find out more!'. At the bottom of this text block is a dark button with the text 'Learn More!'. The entire page has a teal border.

# Tommy Haas

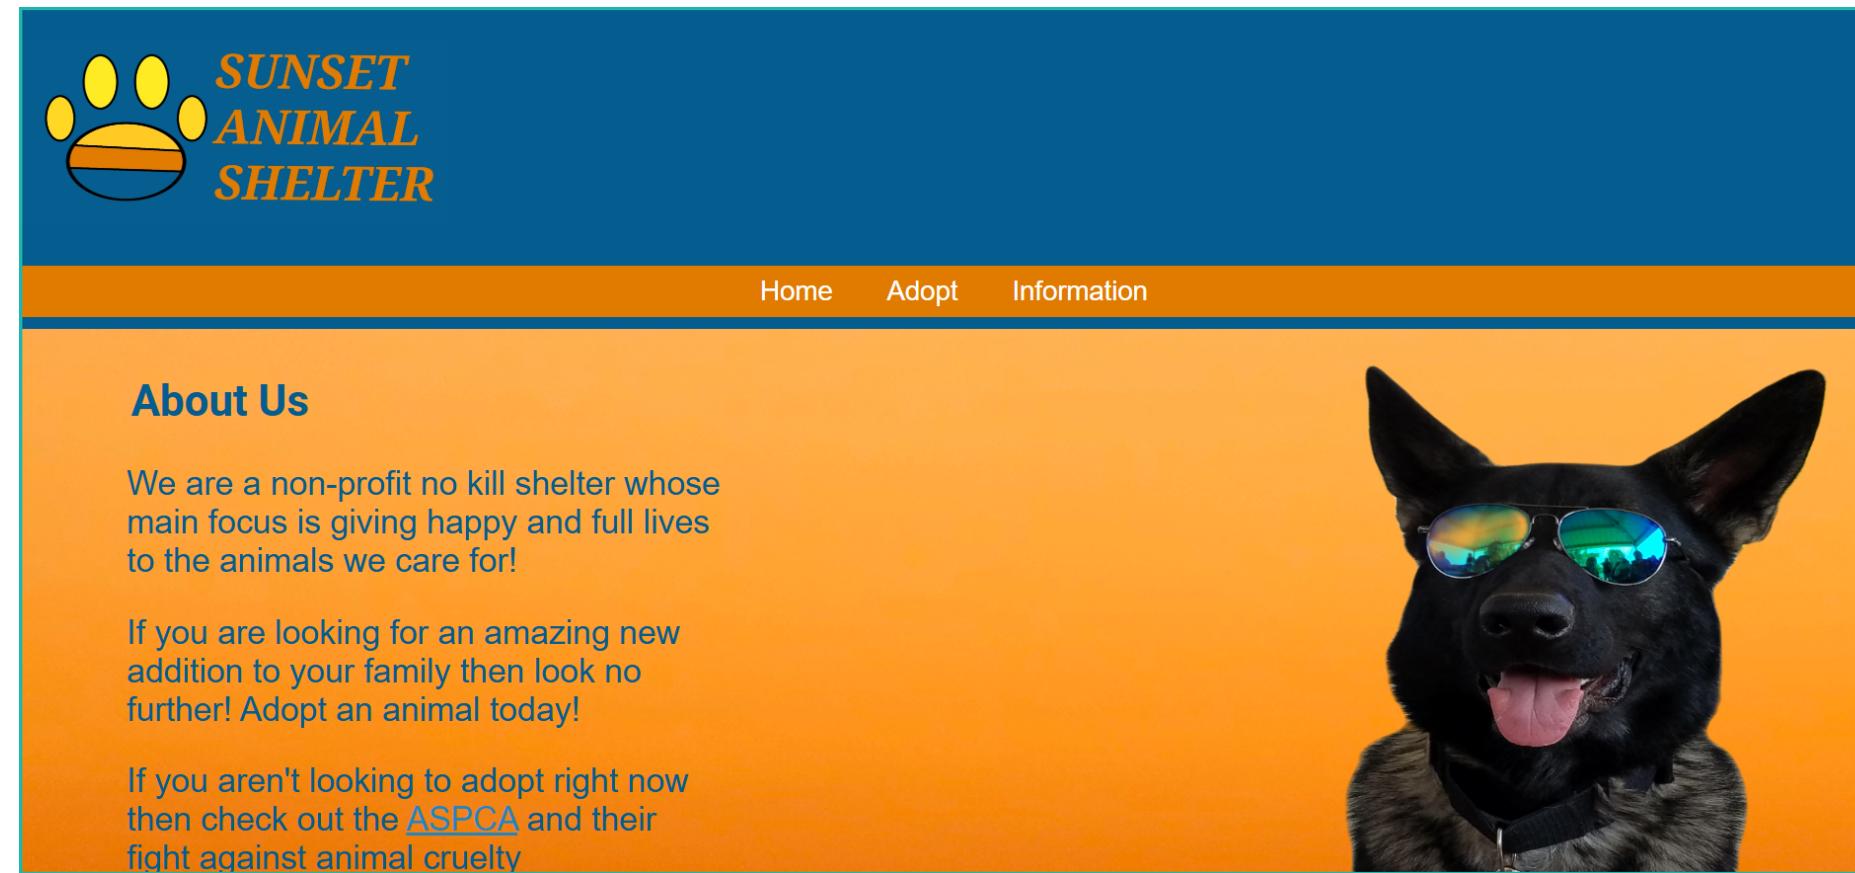

- Project Details: For this project I had to choose an existing site and try to recreate it as closely as I could. This project ended up taking me about 5 hours to complete.
- Purpose and Scope: The purpose of this project was to test our knowledge of styling HTML to get a desired look that was as close as possible to the original. This project was only a single page.
- Design Decisions: All of the design decisions that I made were made in the interest of looking as close to the original product as possible.
- Required Elements: This project required me to utilize my knowledge of HTML and CSS to find the best way to accurately include all of the visual elements that the original page had.
- Results: This project helped me learn how to do a navigation bar that's split into 3 sections and it just overall helped me to be more resourceful with figuring out how to best display certain visual elements. I also received full points for this assignment.

# First Portfolio

Hello, my name is Cameron Carter, welcome to my resume page! If you are looking for a more in depth look at a few of my skills, navigate to my skills page. If you'd like to know more about my past experience, check out my about page. If you'd like to get in touch with me, leave a message on my contact page.

- Project Details: This class project had me make my very first portfolio website. By the time I finished this project I had spent about 20 hours making it.
- Purpose and Scope: The purpose of this project was to give me experience with making a multi-page website and to put my knowledge I had learned throughout the class to the test as this was the final project of this particular course. This was my very first 4 page website so this was particularly challenging for me at the time.
- Design Decisions: The main purple of this website was chosen to signify Weber State University as this assignment was supposed to be Weber themed. I then chose yellow as an accent as it's the complementary color of purple and I wanted some other color besides just purple. We had also learned about background graphics and thus I implemented one to add some visual flair.
- Required Elements: As this class had recently taught me about background graphics I was required to implement one into this project. I also had to put in a video that related to me in some way and then a form for people to contact me.
- Results: With this project I ended up with a fun finished product that had allowed me to play around with certain elements and tested my then fairly limited knowledge of CSS and HTML. I still enjoy the background graphic quite a bit and with the rest of the design it's still fun to look back and see how far I've come. This project was a success in my eyes as tested me and I received an A grade on it.

# About Me

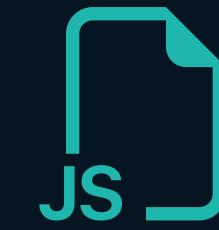

Hi, I'm Cameron, an aspiring developer looking to make my mark on the world of Web and UX!

I am a student at Weber State University majoring in Web and User Experience. I will be graduating with my Associate degree in December and will then set my sights on working towards my bachelors degree. Currently, I am on track to graduate with my bachelors in December 2026. I have completed each of my major related courses with an A grade and I am maintaining an overall 3.91 GPA. I have been able to keep up these grades while working 32+ hours a week and being a full-time student. I am a very hard-working individual who gets things done in both work and school.

When I have some spare time I really enjoy gaming with my friends. If I'm feeling a little more adventurous on a given day then I also really enjoy hiking and bike riding. I also love going to my local arcades as I am weirdly good at the game Crossy Road and through being good at this game I have won 3 Nintendo Switches, 3 Xboxes, a PS4 Pro, 2 pairs of Airpods, a scooter, and more!

When I graduate with my bachelors, I intend to find employment as a full-stack web developer and as such I will be starting full-stack related courses during this next semester. Until that point, I am looking for internship opportunities that would allow me to get some experience in the field of Web and UX.
